

NISHANTH M

DevOps Engineer | Site Reliability Engineer | Cloud Infrastructure

+91 9489812743 • imnishanth23@outlook.com • linkedin.com/in/mnishanth23 • Tamil Nadu, India

PROFESSIONAL SUMMARY

DevOps Engineer with 2+ years building CI/CD pipelines, automating operational workflows, and resolving production incidents in fast-moving cloud environments. Proficient in Python for scripting, automation, and back-end integrations; experienced owning issues end-to-end — from root-cause analysis through Level 2 support and resolution. Proven track record of reducing environment provisioning from 2 days to under 8 hours through full bash automation, delivering zero-failure production deployment records, and implementing monitoring and observability stacks from the ground up. Experienced with AWS, Docker, Prometheus, Grafana, ELK Stack, and SOC 2 compliance management.

TECHNICAL SKILLS

Cloud & Infrastructure: AWS (EC2, IAM, S3), Docker, Docker Compose, Shell/Bash Scripting

CI/CD & Automation: Drone CI, Jenkins, CI/CD Pipeline Design, Release Management, Deployment Automation

Monitoring & Observability: Prometheus, Grafana, ELK Stack (Elasticsearch, Logstash, Kibana), OpenTelemetry

Databases: PostgreSQL, MongoDB, MariaDB, ClickHouse, SQL — container provisioning, query writing, schema management, and operational support at DevOps level

Programming & Scripting: Python, Bash/Shell, SQL, Flask, HTML/CSS

Security & Compliance: SOC 2 Compliance Management, HashiCorp Vault, Sprinto

Version Control & Collaboration: Git, GitHub, Bitbucket, Jira

PROFESSIONAL EXPERIENCE

Associate DevOps Engineer | SMI Tech Group, Madurai, Tamil Nadu | Jan 2026 – Present

- Reduced full customer environment provisioning from **2 days to 7-8 hours** by designing end-to-end bash automation covering SSL certificate generation, Docker/Docker Compose, Karaf, Java, and Python installation across all environment tiers
- Delivered a **zero-failure production deployment record** across all customer-driven releases by maintaining strict pipeline quality gates and pre-prod environment parity
- Cut database provisioning to **under 20 minutes** by scripting containerised deployment of MongoDB, MariaDB, Redis and PostgreSQL with required privileges — eliminating manual DB setup entirely
- Served as primary responder for **1-2 production incidents per week**, performing structured root-cause analysis and documenting fixes to prevent recurrence
- Migrated CI/CD tooling from Jenkins to Drone CI, improving pipeline maintainability and supporting faster, more reliable production releases
- Maintained SOC 2 audit readiness by owning compliance tracking and evidence collection using Sprinto, reducing manual audit preparation effort

Junior DevOps Engineer | SMI Tech Group, Madurai, Tamil Nadu | Jun 2025 – Dec 2025

- Accelerated software delivery by designing and maintaining CI/CD pipelines for containerised application deployments, reducing manual intervention in the release process
- Reduced repeat production incidents by leading structured root-cause analysis and post-incident reviews, converting findings into documented runbooks for the team
- Supported Docker-based deployment workflows, contributing to environment consistency across development and staging tiers

- Participated in on-call rotations and incident management activities, supporting platform stability and reliability objectives

Site Reliability Engineer (Trainee) | *SMI Tech Group, Madurai, Tamil Nadu* | Jan 2025 – May 2025

- Improved on-call response speed by developing standardised runbooks and operational documentation for production environments, reducing time-to-acknowledge during incidents
- Supported platform stability by participating in on-call rotations and contributing operational improvements based on recurring incident patterns
- Assisted in maintaining production environments while supporting reliability and uptime objectives

Site Reliability Engineer (Intern) | *SMI Tech Group, Madurai, Tamil Nadu* | Jul 2024 – Dec 2024

- Improved incident detection speed by implementing end-to-end monitoring and alerting using Prometheus, Grafana, and the ELK Stack across production infrastructure
- Reduced manual log review effort by building Python-based automation for log analysis and infrastructure operations
- Streamlined SOC 2 audit evidence collection by automating compliance workflows using Sprinto, reducing manual preparation time per audit cycle

PROJECTS

Web Phishing Detection Using Machine Learning — *Python, TensorFlow, Scikit-learn, Flask*

- Built a real-time phishing detection system with a Flask-based web interface for website legitimacy verification, integrating detection mechanisms into browser and proxy environments
- Engineered features from URL structure and metadata to improve model accuracy; collected and processed datasets end-to-end for model training

LSTM-Based Phishing Detection for Big E-mail Data — *Python, TensorFlow, Keras*

- Designed an LSTM deep-learning model for large-scale spam detection with scalable preprocessing pipelines; presented findings at ICRTSET 2K23 International Conference

EDUCATION

Bachelor of Engineering (B.E.) in Computer Science and Engineering

Loyola Institute of Technology and Science, Thovalai | 2019 – 2023 | CGPA: 7.8 / 10.0

CERTIFICATIONS & TRAINING

- Python Training — National Skill Development & Certification Authority, New Delhi
- Data Science Using Python Master Class — Scaler Academy
- Machine Learning Master Class — Pantech e-Learning
- Data Science Hands-on Training — Loyola Institute of Technology and Science
- Ethical Hacking Internship — Kaashiv Infotech, Chennai
- Build an E-Commerce Platform Using React — Scaler Academy

LANGUAGES

English — Professional Proficiency **Tamil** — Native Proficiency
